

## **FARMING IS FUN!**

Students of class V, accompanied by their Teachers, spent half of their school day farming on the 6<sup>th</sup> of January, 2016. All of them left for Active Farm School located in the premises of the Engineering Staff College of India. The students could enjoy the warmth of the farm animals while feeding them also the write in a strange feeling as they allowed the earthworms to wriggle in their palms. They could sense the difference in the air when they bent their backs to plant the paddy saplings with their feet soaked in mud. As they learnt about the various leaves and plants, they understood the importance of manure, vermi-compost and of course, the organic pesticide which they made and sprayed on their own, on being provided with the different ingredients.

Overall the students came back with a sense of achievement as they did learn something new!
